Caleb Chelstrom

Anoka, MN | cachelstrom@gmail.com

Security Platform Engineer | Cloud Engineering | Automation | DevSecOps

PROFESSIONAL SUMMARY

Army veteran and senior security platform engineer with 7+ years spanning IAM operations, security automation, and enterprise cloud engineering. Architect and technical lead behind enterprise-scale AI solutions, automation platforms, HashiCorp Vault integrations, and AWS infrastructure for a top-10 U.S. bank. Proven record designing secure, scalable, least-privilege systems with Python, Terraform, and CI/CD, and shifting operational load left through self-service automation trusted across the enterprise.

CORE SKILLS

- **Security & IAM:** HashiCorp Vault Enterprise, CyberArk PAM, SailPoint IIQ, Active Directory/LDAP, IAM, RBAC, PBAC, EBAC, secrets management, least-privilege policy design
- **Cloud & Infrastructure:** AWS, Azure, Terraform, Kubernetes, Docker, Rancher, RHEL, VPC, Route53/Private Link, CloudWatch/EventBridge, SNS, S3, EC2, Dynamo DB, RDS, Bedrock
- **Programming:** Python, Go, TypeScript, PowerShell, PostgreSQL, MySQL, REST APIs, Swagger, Postman, FastAPI, Svelte
- **DevSecOps & Automation:** GitLab CI/CD, GitHub Actions, Jenkins, Ansible, Terratest, Git, Apache Airflow, Hatchet
- **Observability & ITSM:** Splunk, Grafana, Prometheus, Datadog, PagerDuty, ServiceNow
- **Architecture & Practice:** Solution architecture, platform engineering, secure SDLC, Agile, Jira

PROFESSIONAL EXPERIENCE

Senior Security Platform Engineer | 2023 - Present

U.S. Bank | Remote

AI-Enabled Automation & Security Platform Engineering

- Designed and built a production multi-agent AI assistant that automates full-lifecycle Jira/Confluence operations, context-aware documentation management, and end-to-end IAM, DevOps, and cloud infrastructure workflows across 226+ repositories with human-in-the-loop approval gates.
- Conceived, architected, and led delivery of an enterprise security operations platform serving as the central workspace for Security Access Operations automation, reporting, governance, and operational enablement.
- Designed a scalable automation framework supporting reusable workflows, event-driven processing, scheduled execution, and API-based integrations across IAM and security operations functions.
- Implemented CI/CD pipelines, containerization standards, and secure development practices meeting enterprise deployment and audit requirements.
- Defined platform strategy, architecture, governance controls, and operating model while aligning requirements across engineering, operations, and leadership stakeholders.

HashiCorp Vault & IAM Automation

- Served as SME for configuration and integration of the bank's HashiCorp Vault Enterprise platform across all application use cases, scaling to 28,000+ stored secrets and ~150,000 authentication tokens generated per hour.
- Spearheaded a "shift-left" initiative, architecting Python automations that offloaded repetitive Vault integration support to Security Operations and freed engineering bandwidth for high-priority work.
- Designed and launched a self-service onboarding platform for Vault's AWS auth method (Python, Svelte, TypeScript, PostgreSQL), enabling end users to configure EC2/IAM authentication independently.

- Orchestrated a zero-downtime migration of enterprise Active Directory secrets from the deprecated Vault AD engine to the modern LDAP engine, coordinating across teams for 100% service continuity.
- Owned API onboarding and integrations for all IAM automation customers, enforcing least privilege via custom JSON policies across SailPoint IIQ, Active Directory, CyberArk PAM, Vault, SQL databases, and RHEL machines.

Cloud Security & Reliability Engineering

- Architected an AWS service-quota monitoring system tracking 2,100+ quotas across 18+ accounts with DynamoDB-backed stateful alerting, achieving 99%+ noise reduction while preventing quota-driven outages.
- Built a continuous-delivery solution (Python, boto3, Docker, Spinnaker, Kubernetes) provisioning least-privilege IAM users via a Terraform module, reaching 32,000+ total and 1,024 weekly downloads by application teams.
- Engineered a multi-region observability framework (Terraform, CloudWatch/EventBridge, SNS-to-PagerDuty) for critical NAT infrastructure across Dev/QA/Prod, sustaining high availability of customer-facing connectivity.
- Implemented automated Terraform testing with Terratest (Go) and GitHub Actions, enforcing 100% compliance with IAM security and IP-based access policies.
- Provisioned secure cross-account connectivity (Route53 private zones, VPC endpoints, PrivateLink) and hardened network posture via IaC-managed NACLs and security groups.

Security Automation Engineer | 2022 - 2023

U.S. Bank | Remote

- Delivered automation across 60+ Jira stories for InfoSec and application teams, streamlining GDPR-compliant processes.
- Engineered a REST microservice suite of 13 documented APIs (Swagger) performing read/write operations against LDAP, MySQL, and CyberArk, eliminating manual server-access provisioning previously owned by the entire Unix/Linux administration team.
- Built a self-service platform for Active Directory object management (Python), achieving a 100% reduction in manual task load and improving SOC 2 compliance.
- Developed an object-oriented Python solution to revoke access for users overdue on quarterly security training, saving $5.75M and strengthening ISO 27001-aligned identity lifecycle management.
- Refactored OIM automation and REST APIs in preparation for migration to SailPoint.

Unix/Linux System Administrator | 2021 - 2022

U.S. Bank | St. Paul, MN

- Elevated Information Security SLA attainment to 99% by overhauling access management for 60,000+ users under GDPR and SOC 2 controls.
- Administered and engineered CyberArk PAM for onboarding, privileged account vaulting, credential management, and password rotation.
- Authored CyberArk PAM architecture documentation published in the bank's architecture catalog, aligned to SOC 2.
- Semi-automated IAM provisioning across Active Directory, CyberArk, and Unix/Linux with PowerShell, cutting manual workload 90%.

AWS Cloud Engineer | 2022 - 2023

Capella University - Master's Consulting Project

- Designed and migrated a full LAMP stack to AWS; deployed EC2, S3, and RDS with IAM policies and security groups for scalable, secure infrastructure.

U.S. Army Artilleryman | 2013 - 2019

U.S. Army | United States

- Honorable service establishing a foundation in discipline, operational execution, and team leadership.

EDUCATION

- **M.S. Information Technology** - Enterprise Networks & Cloud Computing, Capella University | 2021 - 2023
- **B.B.A.**, University of Northwestern - St. Paul | 2015 - 2019

CERTIFICATIONS

- Software Security Practitioner (SSP), 2021
- Microsoft Certified: Azure Fundamentals, 2021
- Microsoft Certified: Azure Data Fundamentals, 2022
