Caleb Chelstrom

Anoka, MN | cachelstrom@gmail.com

IAM Engineer

Security Engineering | Cloud Engineering | Automation | IT Architecture

Army veteran and Senior DevSecOps Engineer with seven years of combined experience from a Master's degree and hands-on work in cloud technologies, automation engineering, and innovative solution implementation within high-performing DevSecOps/Middleware environments. Proficient in Python object-oriented programming, AWS & Azure cloud engineering, software engineering and monitoring, operations engineering, API development, secrets management SaaS onboarding and integrations for HashiCorp Vault and CyberArk, technical design, and enterprise-level automation software development and testing. Eager to leverage my expertise to drive efficiency and innovation in a dynamic organization.

KEY SKILLS

Python | Go (Golang) | PowerShell | VB | MySQL | PostgreSQL | Grafana | Prometheus | Red Hat Enterprise Linux | Git | Git Bash | Jenkins | Kubernetes | Rancher | Terraform | Ansible | Azure | AWS | EC2 | S3 | RDS | HashiCorp Vault | CyberArk | Splunk | SailPoint (IIQ) | REST APIs | OpenAPI | Swagger | Postman | ServiceNow | Active Directory | Apache Airflow | GitLab | Jira | Solution Architecture | Agile | Object-Oriented Programming | Identity & Access Management (IAM) | RBAC | EBAC | PBAC | SSO

WORK EXPERIENCE

Cloud Software Engineer

Disney Streaming (Disney+, Hulu, ESPN, etc.) | Remote 2024 - Present

Senior Integration Engineer

U.S. Bank | St. Paul, MN 2023 - 2024

- Sole SME responsible for maintaining the configuration and integration of the Bank's HashiCorp Vault Enterprise solution for all application use cases.
- Led the seamless onboarding and integration of Identity and Access Management (IAM) software solutions into customer software ecosystems, enhancing system interoperability and user access control through SSO and federated protocols.
- Pioneer integrations of HashiCorp Vault for all U.S. bank application resulting in 28,000+ stored secrets across all namespaces, and roughly 150,000 authentication tokens generated per hour.
- Manage custom integration use cases of various OIDC solutions to HashiCorp Vault for applications to generate tokens or retrieve secrets via retrievable JWT (JSON Web Token), Java client connections for Java applications, Kubernetes service accounts, various methods of AWS user authentication (CLI, UI, Python, cURL), and authentication via a GitLab Project/ Group and a GitLab Runner, and finally a home built auto auth solution for Windows and Linux VMs.
- Utilize Terraform for managing IAM permissions on our AWS account and for provisioning our S3 buckets for backing up the past one-hundred versions of HashiCorp Vault.
- Maintain, enhance, and monitor automations pertaining to HashiCorp Vault entity alias policy assignment and customization, engine provisioning, and secret rotation.
- Own and manage API onboarding and integrations for all IAM automation customers, ensuring least privilege via OAuth where authorization is defined by my JSON based policies customized for the client application's use case(s) for our APIs that perform read write actions with SailPoint

IIQ, Active Directory, CyberArk PAM, HashiCorp Vault, SQL databases, and RHEL virtual machines.

Security Automation Engineer
U.S. Bank | St. Paul, MN 2022 – 2023

- Pioneered engineering automation solutions across over 60 JIRA stories that were delivered to a wide range of both InfoSec and non-security application teams, significantly enhancing operational efficiencies through streamlined GDPR-compliant processes.
- Conceptualized and implemented a cutting-edge REST Microservice Solution, engineered 13 APIs from scratch with Swagger for documentation, this suite of APIs perform various read write operations against LDAP, MySQL database, and CyberArk that revolutionized operations by obviating manual server access provisioning previously handled by the entire Unix/Linux System Administration team, thereby enhancing productivity and system reliability all new RHEL virtual machine builds.
- Coordinated cross-functional teams in the development and deployment of Identity Management solutions into their own IaC solutions (Ansible, Terraform, Helm).
- Fostered collaborative efforts with Security Access Operations teams to devise a user-centric, self-service platform for Active Directory object management, employing Python scripting to achieve a groundbreaking 100% reduction in manual task loads, substantially improving operational agility and SOC 2 compliance.
- Orchestrated the development and continued maintenance of an innovative object-oriented strategy, using Python scripts, to systematically revoke access for users over-due on quarterly security training, achieving remarkable cost savings of $5.75 million by enhancing overall Identity Lifecycle Management and enhancing compliance with industry standards like ISO 27001.
- Developed and deployed a VB based GUI leveraging REST APIs that I built for remote execution of CLI administrative tasks on RedHat Linux servers, utilizing React for the front end, securing $8.3 thousand in cost efficiencies and doubling process efficiency, thereby setting a new standard for server provisioning workflows.
- Refactored OIM related automation code and REST APIs in preparation for migrating our access management solution to SailPoint.

AWS Cloud Engineer
Capella University Master's Consulting Project 2022 - 2023

- Designed and implemented AWS cloud solutions for a client, enhancing system efficiency and security.
- Led the redesign and migration of digital assets, including a full LAMP stack (Linux, Apache, MySQL, PHP) to AWS.
- Configured and managed AWS IAM policies to control and secure access.
- Deployed and maintained EC2 instances, S3 buckets, and RDS databases to ensure scalable and reliable infrastructure.
- Applied AWS Security Groups for enhanced network security and compliance.

Capella University Master's Course Work Projects 2021 - 2023

- Configuring Cross-Region Replication for S3 Buckets.
- Automate the creation of a highly available website that will load balance traffic across multiple web servers utilizing ACLs for secure networking, S3 buckets for storing static assets, a fleet of web servers running on an EC2 instance in a VPC by using both an Application Load Balancer and Auto Scaling group.

- Enabling cross-region replication and archiving on a VPC using EC2 instances, security groups and a Lambda function that is VPC-enabled; ensure all communications between AWS and the public environment were over a secure tunnel.
- Establishing secure access to S3 buckets using AWS IAM policies.
- Implement Health Checks for EC2 instances using Eventbridge for Route 53 network monitoring.

Unix/Linux System Administrator
U.S. Bank | St. Paul, MN 2021 – 2022

- Elevated Info Security's SLA attainment to 99% for 2021/2022, by leading the strategic overhaul of access management processes, accommodating over 60,000 onsite and remote users with GDPR and SOC 2 compliant protocols, thereby ensuring robust security and operational excellence.
- As the Unix/Linux Subject Matter Expert (SME), fostered collaboration with application and database teams using Agile methodologies, markedly advancing system access management efficiency across all server platforms.
- Expertise in CyberArk administration and engineering for various use cases such as onboard and provision users, provisioning and vaulting privileged service accounts, configuring password rotations, manage credentials.
- Orchestrated the development and publication of CyberArk Privileged Access Management (PAM) Architecture documentation in U.S. Bank's Architecture catalog, employing best practices in cybersecurity to fortify privileged account security, aligning with industry standards like SOC 2.
- Transformed IAM provisioning operations in Active Directory, CyberArk, and Unix/Linux servers through semi-automation using PowerShell scripts, achieving a 90% reduction in manual workload, and ensuring LDAP and SAML protocol compliance, significantly elevating process efficiency and security posture.

U.S. Army Artilleryman
U.S. Army | United States 2013 –2019

EDUCATION

Master of Science in Information Technology (Enterprise Networks & Cloud Computing**)**
Capella University 2021 –2023

Bachelor of Business Administration
University of Northwestern - St. Paul 2015 –2019

CERTIFICATIONS

Software Security Practitioner (SSP)	2021
Microsoft Certified: Azure Fundamentals	2021
Microsoft Certified: Azure Data Fundamentals	2022
